

WindMSG Tutorial #8 (Changing screens using PLC logic)

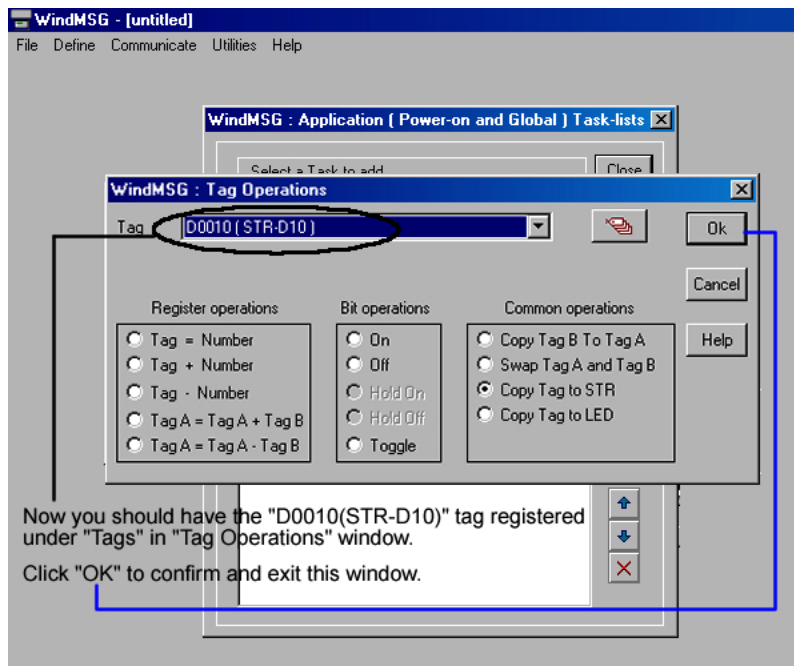

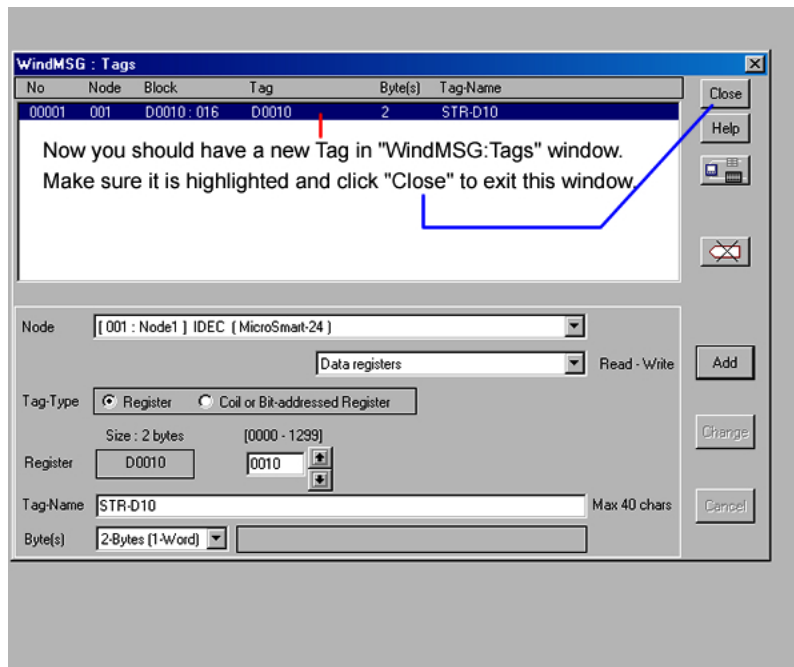

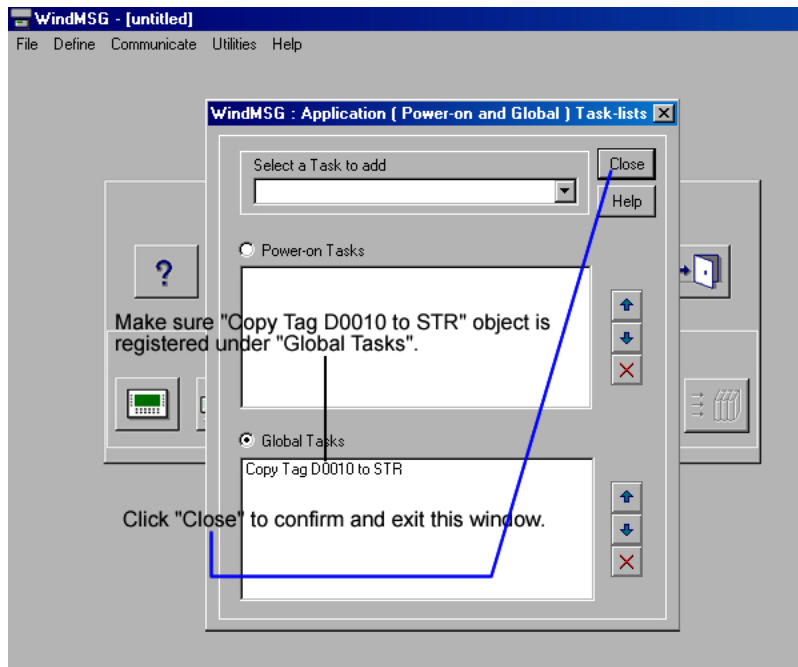

END OF WINDMSG TUTORIAL -PART# 8

Save this project and download it to HG1X unit. In order to trigger pages write values 1,2 or 3 in to D10 (Data Register# 10) in your PLC. Depending on the value in D10, HG1X will display the corresponding screen.

Example: If D10=1, then HG1X will switch to screen 1
if D10=2, then HG1X will switch to screen 2 etc..
